

IT314 - SOFTWARE ENGINEERING

Sequence and Activity diagram

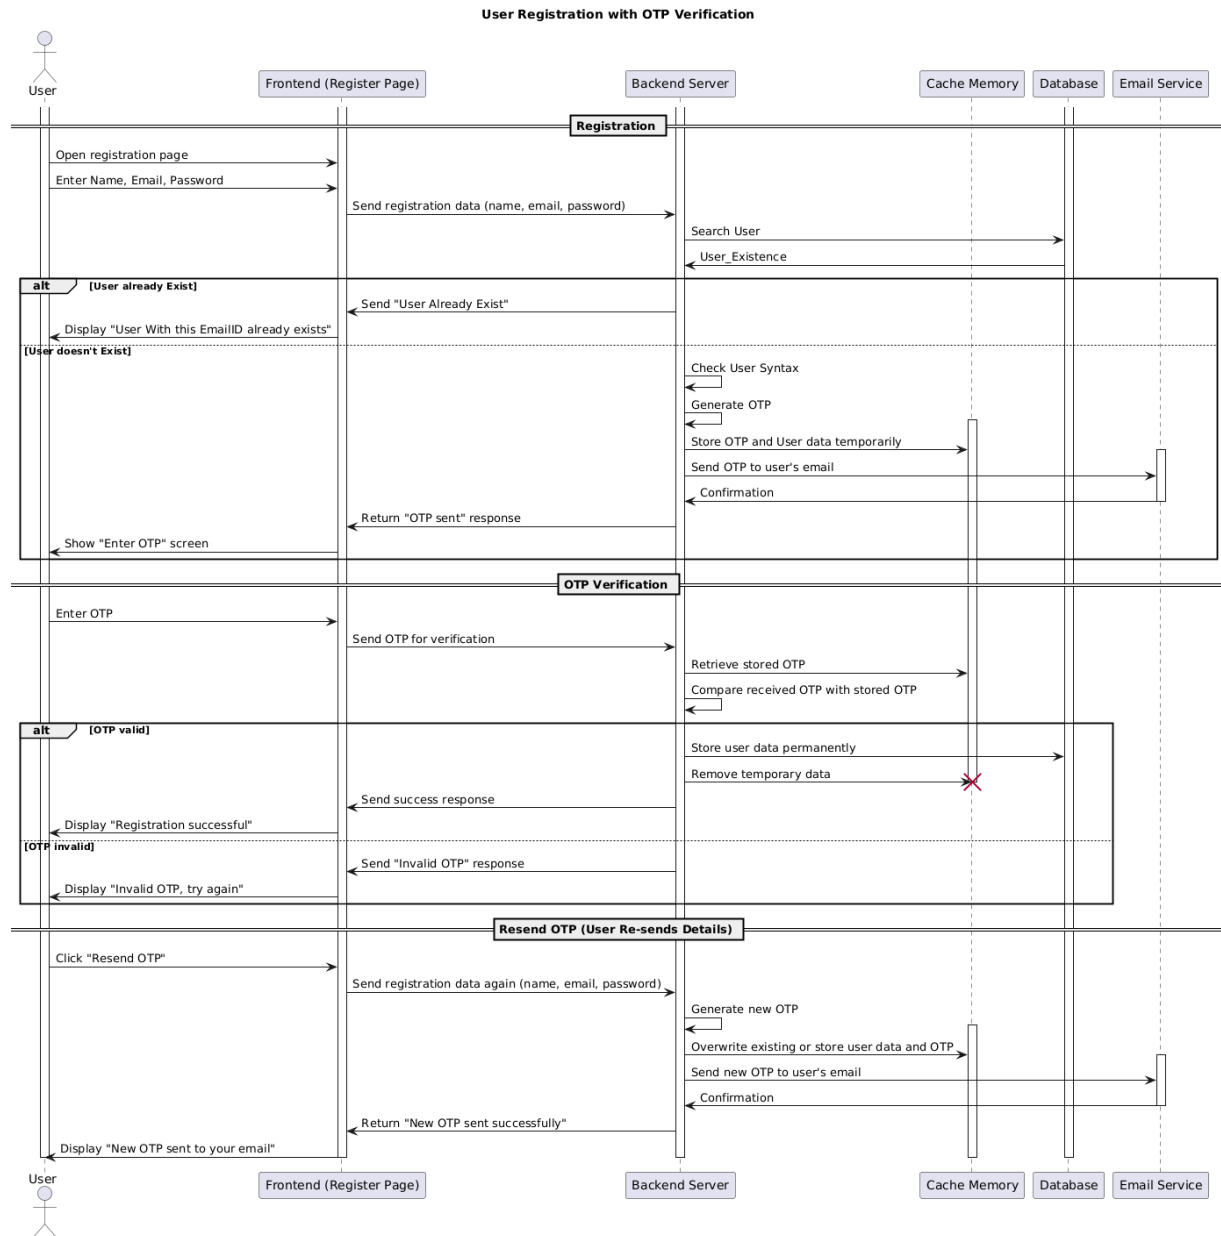

User Registration.

Generated Sequence Diagram:

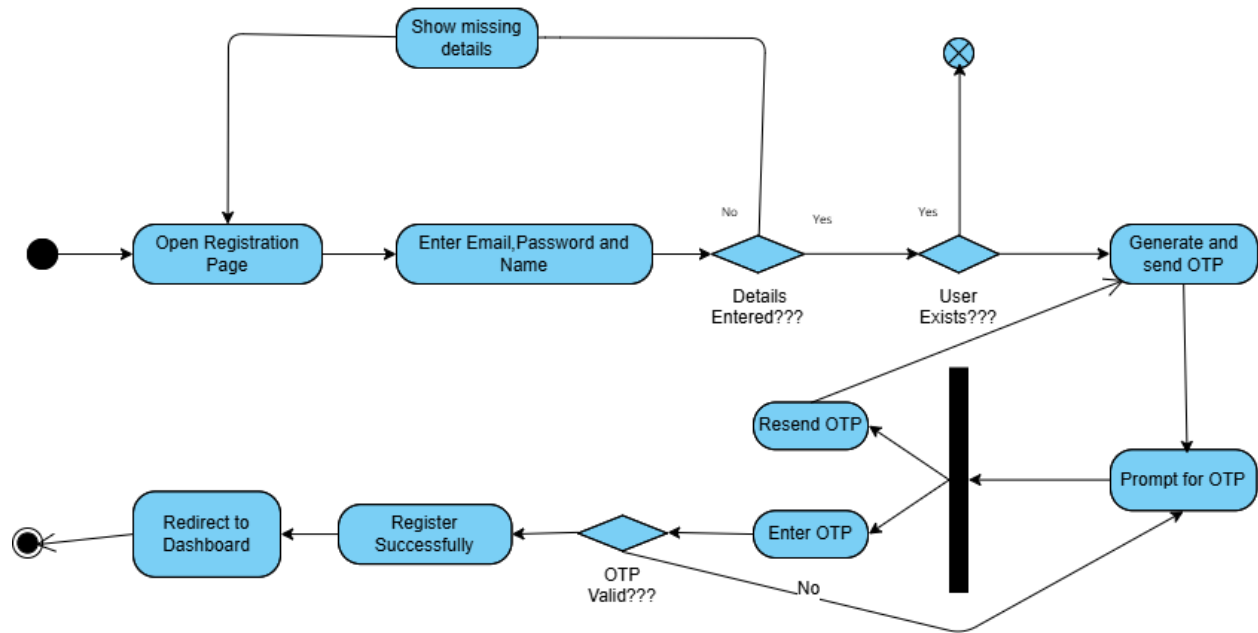

The Generated Diagram is correct but, sequence of working is different from what thought and how it should be done because we can store otp and data combinedly for efficient usage and the updated diagram is as follows:

Updated Manually As per working:

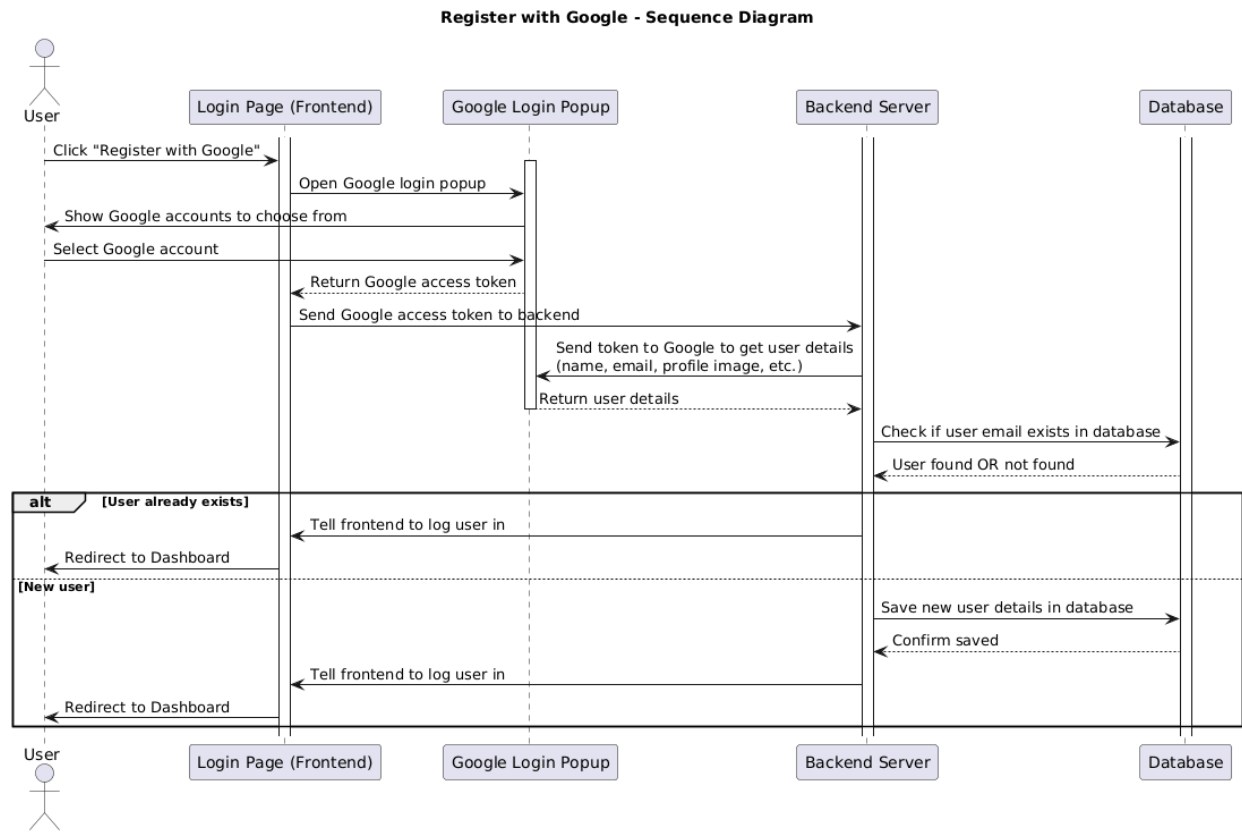

Manually Created Activity Diagram for User Registration:

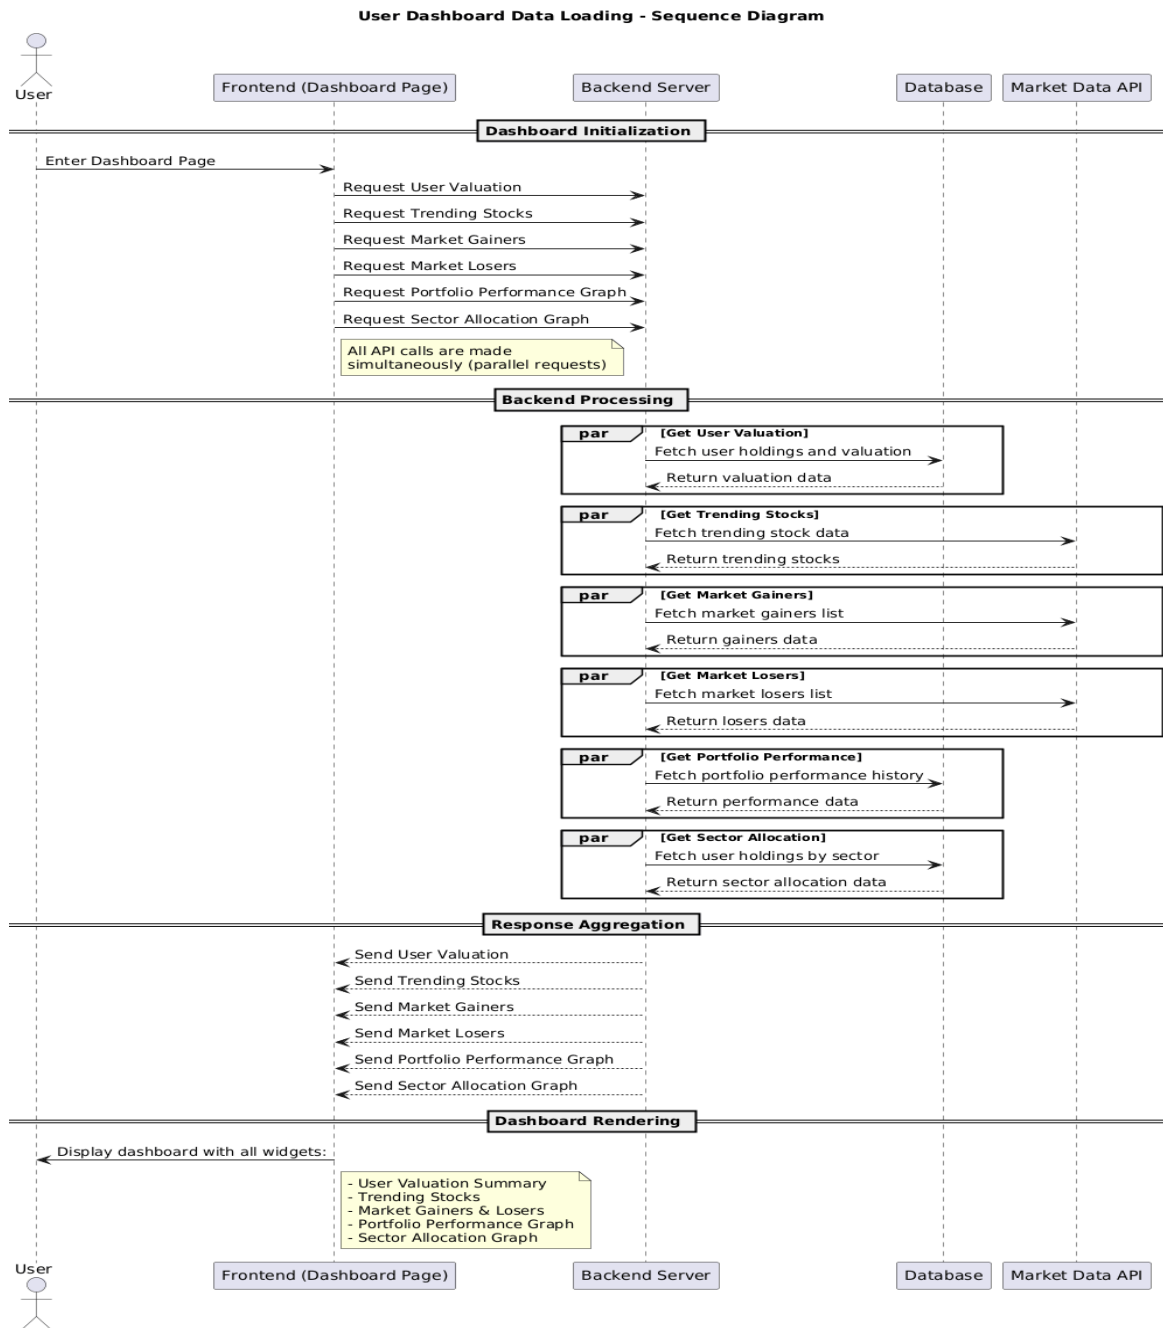

Registration Activity Diagram

Register With Google Sequence Diagram

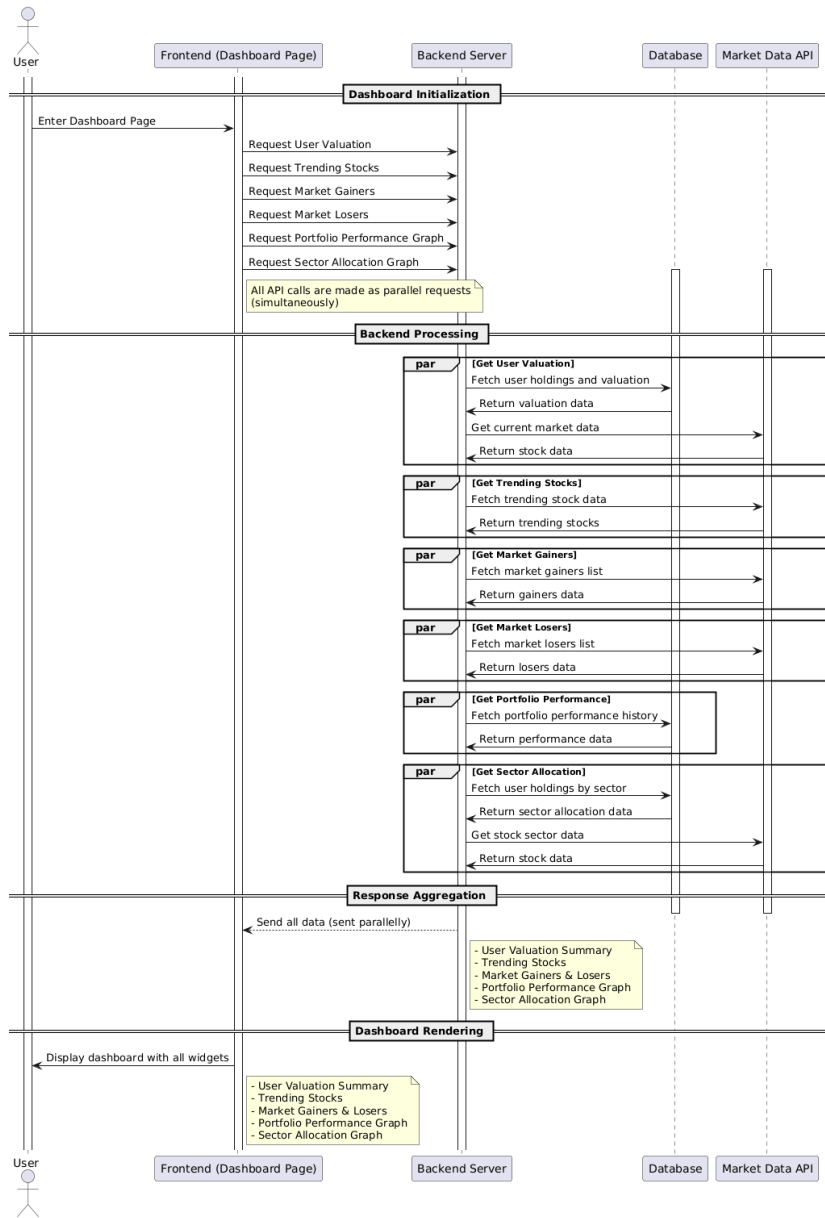

Dashboard

This has many Flaws like User valuation depends on Real time data So it should also take data from API and same goes for the sector allocation because it also depends on current data.

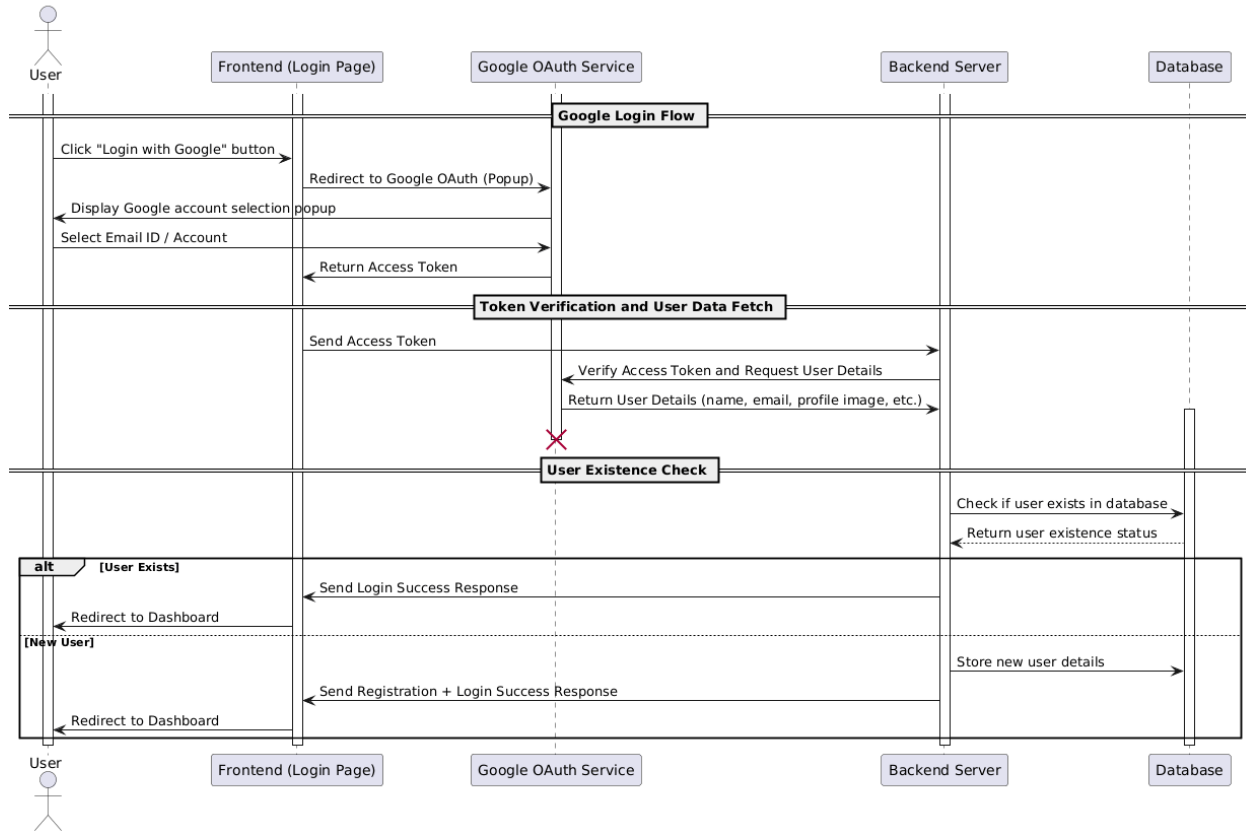

Updated Sequence Diagram:
